

SYSTEM 7000

Wire-Free

Asset Protection Transmitter

- Wire-free activation
- Fully Addressable
- 1 Year battery life
- Lightweight
- Range in excess of 150 metres

7930

Overview

The model 7930 inertia sensor transmitter is ideal for the protection of high value items, particularly paintings and associated artefacts, or where a high integrity alarm detector is required without the need for unsightly or expensive cable installations.

The device is built around a high sensitivity detector coupled to a UHF radio transmitter. When movement is above a factory set limit, the radio transmitter sends its alarm signal to a remote radio receiver located within the protected premises. For picture protection, the unit is provided with gold plated suspension springs which are attached to the horizontal stretcher along the top rear of the painting.

The unit is powered by two 3 volt lithium cells and under normal usage, these cells should last a minimum of one year.

When installed in conjunction with the EMS IRIS receiver, up to 256 individual transmitters can be individually identified at the receiver.

Specification

PHYSICAL:	DIMENSIONS:	65.80 x 36.30 x 16.80mm
	WEIGHT:	25.35g
	COLOUR:	White
ENVIROMENT:	TEMPERATURE:	-10 to +55 degrees C
	HUMIDITY:	Up to 75% non-condensing
SUPPLY:	2x 3 volt lithium cells	
OPERATING FREQUENCIES:	UHF – 458.5 – 459.5 Mhz	
CHANNEL SPACING:	25 kHz	
OUTPUT TRANSMITTER POWER:	1 mW fixed	
OUTPUTS:	Alarm transmission Battery condition
